Summary

Mobile App Developer skilled in Android (Kotlin, Java, Jetpack Compose) and Flutter (Dart). Experienced in building scalable, user-centric applications with clean architecture (MVVM), strong API integration, Firebase, and backend development using Node.js, Express, MongoDB, and MySQL. Passionate about delivering reliable solutions with smooth UI/UX and optimized performance.

Work Experience

Mobile App Developer - Aradhya Technologies Pvt. Ltd., Varanasi Sep 2024 – Present

– Developed modern Android apps using Kotlin, Jetpack Compose, Material Design, and MVVM.
– Integrated Firebase services including Auth, Firestore, Cloud Messaging, and Play Billing.
– Built secure backend communication using Retrofit-based REST APIs.
– Implemented reusable architecture patterns and optimized rendering performance.
– Created Flutter modules for hybrid use cases and cross-platform screens.
– Designed and maintained backend services using Node.js, Express, MongoDB, and MySQL.

Projects

Online Form India Android, Java, MySQL

– Enables users to fill government/private forms (scholarships, PAN card, etc.) directly from mobile.
– Features include form submission, document upload, status tracking, and dynamic fields.
– Built using Android XML + Java with a custom backend using MySQL + REST APIs.
– Published on Play Store: Download Link

Propmize – Property Buying/Selling Platform Flutter, Dart

– Home buyers can explore properties, chat with an AI assistant, and make purchase decisions.
– Sellers can upload, update, and manage their property listings.
– Implemented chat interface, search filters, authentication, and AI guidance module.
